

Functions Sample - Built-in Functions in JasperReports Library

Date & Time - Category for date and time manipulation functions						
Name ▲	Description	Return Type	Parameters			
DATE	Creates a date object using the specified information on day, month and year.	java.util.Date	Name	Description	Type	Required
			Year	The year of the new date	java.lang.Integer	Yes
			Month	The month of the new date	java.lang.Integer	Yes
DATEFORMAT	Format the specified date object using the chosen format pattern.	java.lang.String	Day of month	The day of the new date	java.lang.Integer	Yes
			Selected date	The date to format	java.util.Date	Yes
			Format pattern		java.lang.String	Yes
DATERANGE	Allows to create a JasperReports DateRange instance starting from either a String expression or a Date instance.	net.sf.jasperreports.types.d ate.DateRange	Date range details	The date range information	java.lang.Object	Yes
DATEVALUE	Gives the corresponding numeric value (long milliseconds) for a specified date object.	java.lang.Long	Date object	The object representing the date	java.lang.Object	Yes
DAY	Returns the day of a given date. Date object can be a String, long value (milliseconds) or Date instance itself.	java.lang.Integer	Selected date	The object representing the date	java.lang.Object	Yes
DAYS	Returns the number of days between two dates.	java.lang.Integer	Start date	The initial date	java.lang.Object	Yes
			End date	The end date	java.lang.Object	Yes
DAYSINMONTH	Returns the number of days in a month.	java.lang.Integer	Selected date	The date to check	java.lang.Object	Yes
DAYSINYEAR	Returns the number of days in a year.	java.lang.Integer	Selected date	The date to check	java.lang.Object	Yes
EDATE	Returns a date a number of months away.	java.util.Date	Selected date	The object representing the date	java.lang.Object	Yes
			Months	The number of months after the given date	java.lang.Integer	Yes
HOURL	Returns the hour (0-23) of the day for a given date. Date object can be a String, long value (milliseconds) or Date instance itself.	java.lang.Integer	Selected date	The object representing the date	java.lang.Object	Yes
ISLEAPYEAR	Checks if the given date occurs in a leap year.	java.lang.Boolean	Selected date	The date to check	java.lang.Object	Yes
MINUTE	Returns the minute (0-59) of the hour for a given date. Date object can be a String, long value (milliseconds) or Date instance itself.	java.lang.Integer	Selected date	The object representing the date	java.lang.Object	Yes
MONTH	Returns the month of a given date. Date object can be a String, long value (milliseconds) or Date instance itself.	java.lang.Integer	Selected date	The object representing the date	java.lang.Object	Yes
			Start date	The initial date	java.lang.Object	Yes
MONTHS	Returns the number of months between two dates.	java.lang.Integer	End date	The end date	java.lang.Object	Yes
			Start date	The initial date	java.lang.Object	Yes
NETWORKDAYS	Returns the number of working days between two dates (inclusive). Saturday and Sunday are not considered working days.	java.lang.Integer	Start date	The initial date	java.lang.Object	Yes
			End date	The end date	java.lang.Object	Yes
NOW	Returns the current instant as date object	java.util.Date				
SECOND	Returns the second (0-59) of the minute for a given date. Date object can be a String, long value (milliseconds) or Date instance itself.	java.lang.Integer	Selected date	The object representing the date	java.lang.Object	Yes
			Hours	The hours for the new time value	java.lang.Integer	Yes
TIME	Returns a text string representing a time value (hours, seconds and minutes). If no specific pattern is provided a default formatter is used.	java.lang.String	Minutes	The minutes for the new time value	java.lang.Integer	Yes
			Seconds	The seconds for the new time value	java.lang.Integer	Yes
			Format pattern	The pattern to format the time value	java.lang.String	No
TODAY	Returns the current date as date object	java.util.Date				
WEEKDAY	Returns the day of the week for a given date. Date object can be a String, long value (milliseconds) or Date instance itself.	java.lang.Integer	Selected date	The object representing the date	java.lang.Object	Yes
			Sunday is first day		java.lang.Boolean	No
WEEKNUM	Returns the week number of a given date.	java.lang.Integer	Selected date	The date to check	java.lang.Object	Yes
WEEKS	Returns the number of weeks between two dates.	java.lang.Integer	Start date	The initial date	java.lang.Object	Yes
			End date	The end date	java.lang.Object	Yes
WEEKSINYEAR	Returns the number of weeks in a year.	java.lang.Integer	Selected date	The date to check	java.lang.Object	Yes
WORKDAY	Returns a date a number of workdays away. Saturday and Sundays are not considered working days.	java.util.Date	Selected date	The object representing the date	java.lang.Object	Yes
			Working days	The number of days after the given date	java.lang.Integer	Yes
YEAR	Returns the year of a given date. Date object can be a String, long value (milliseconds) or Date instance itself.	java.lang.Integer	Selected date	The object representing the date	java.lang.Object	Yes
YEARS	Returns the number of years between two dates.	java.lang.Integer	Start date	The initial date	java.lang.Object	Yes
			End date	The end date	java.lang.Object	Yes

Logical - Category for logical operations functions

Name ▲	Description	Return Type	Parameters			
AND	Returns true if all arguments are considered true, false otherwise.	java.lang.Boolean	Name	Description	Type	Required
			Argument		[Ljava.lang.Boolean ;	Yes
EQUALS	Checks if the two specified objects are equal.	java.lang.Boolean	Object 1	The first element to be compared	java.lang.Object	Yes
			Object 2	The second element to be compared	java.lang.Object	Yes
FALSE	Returns the logical value FALSE.	java.lang.Boolean				
IF	Returns one of two values, depending on a test condition.	java.lang.Object	Test condition	An expression returning a boolean value	java.lang.Boolean	Yes
			Value 1 (true)	The value returned when the test is true	java.lang.Object	Yes
			Value 2 (false)	The value returned when the test is false	java.lang.Object	Yes
NOT	Returns the negation of the specified boolean expression.	java.lang.Boolean	Argument	A boolean expression or value	java.lang.Boolean	Yes
OR	Returns true if any of the arguments is considered true, false otherwise.	java.lang.Boolean	Argument		[Ljava.lang.Boolean ;	Yes
TRUE	Returns the logical value TRUE.	java.lang.Boolean				

Numeric / Mathematical - Category for mathematical operations functions

Name ▲	Description	Return Type	Parameters			
ABS	Returns the absolute value of a number.	java.lang.Number	Name	Description	Type	Required
			Number	The number to check	java.lang.Number	Yes
CEIL	Returns the smallest value that is greater than or equal to the argument and is equal to a mathematical integer.	java.lang.Double	Number	Value	java.lang.Number	Yes
FACT	Returns the factorial of a number.	java.lang.Long	Integer number	The argument	java.lang.Integer	Yes
FLOOR	Returns the largest value that is less than or equal to the argument and is equal to a mathematical integer.	java.lang.Double	Number	Value	java.lang.Number	Yes
ISEVEN	Checks if a number is even. If a non-integer number is specified, any digits after the decimal point are ignored.	java.lang.Boolean	Number	The number to check	java.lang.Number	Yes
ISODD	Checks if a number is odd. If a non-integer number is specified, any digits after the decimal point are ignored.	java.lang.Boolean	Number	The number to check	java.lang.Number	Yes
MAX	Returns the maximum of a list of numeric values.	java.lang.Number	Number		[Ljava.lang.Number ;	Yes
MIN	Returns the minimum of a list of numeric values.	java.lang.Number	Number		[Ljava.lang.Number ;	Yes
PRODUCT	Returns the product of a list of numbers.	java.lang.Number	Number		[Ljava.lang.Number ;	Yes
RAND	Returns a random number between 0.0 and 1.0.	java.lang.Double				
RANDBETWEEN	Returns an Integer random number between bottom and top range (both inclusive).	java.lang.Integer	Bottom range	Integer number for the bottom range	java.lang.Integer	Yes
			Top range	Integer number for the top range	java.lang.Integer	Yes
SIGN	Returns the sign of a number.	java.lang.Integer	Number	The number to check	java.lang.Number	Yes
SQRT	Returns the positive square root of a number. The number must be positive.	java.lang.Number	Positive number	Argument	java.lang.Number	Yes
SUM	Returns the sum of a list of numbers.	java.lang.Number	Number		[Ljava.lang.Number ;	Yes

Text - Category for text/string manipulation functions

Name ▲	Description	Return Type	Parameters			
BASE	Returns a text representation of a number, in a specified base radix.	java.lang.String	Name	Description	Type	Required
			Number	The positive integer number to convert	java.lang.Integer	Yes
			Radix	The base radix, an integer between 2 and 36	java.lang.Integer	Yes
			Minimum length		java.lang.Integer	No
CHAR	Returns a single text character, given a character code.	java.lang.String	Char code	The character code, in the range 1-255	java.lang.Integer	Yes
CLEAN	Returns a new text string without non-printable characters.	java.lang.String	Text	The text to be cleaned	java.lang.String	Yes
CODE	Returns the numeric code (0-255) for the first character in a string.	java.lang.Integer	Text		java.lang.String	Yes
CONCATENATE	Combines a list of strings into a single one.	java.lang.String	Text	Argument	[Ljava.lang.String;	Yes
DOUBLE_VALUE	Returns a Double number representing the given text string.	java.lang.Double	Number (as text)	The input text string representing a number	java.lang.String	Yes
EXACT	Returns TRUE if the two text specified are exactly the same (case sensitive compare).	java.lang.Boolean	Text 1	The first text to compare	java.lang.String	Yes
			Text 2	The second text to compare	java.lang.String	Yes
FIND	Returns the character position of a string inside another text. If the text is not found then -1 is returned.	java.lang.Integer	Find text	The text to look into	java.lang.String	Yes
			Text to search	The text string to search	java.lang.String	Yes
			Start position		java.lang.Integer	No
FIXED	Returns the text representing number with the specified decimal places.	java.lang.String	Number	The number to print out	java.lang.Number	Yes
			Decimals	The number of decimal places	java.lang.Integer	Yes
			Omit separators		java.lang.Boolean	No
FLOAT_VALUE	Returns a Float number representing the given text string.	java.lang.Float	Number (as text)	The input text string representing a number	java.lang.String	Yes
INTEGER_VALUE	Returns an Integer number representing the given text string.	java.lang.Integer	Number (as text)	The input text string representing a number	java.lang.String	Yes
LEFT	Returns the specified number of characters (1 by default) from the left side of the input text.	java.lang.String	Text	The input text	java.lang.String	Yes
			Characters num		java.lang.Integer	No
LEN	Returns the length of the specified text string.	java.lang.Integer	Text	The input text string	java.lang.String	Yes
LONG_VALUE	Returns a Long number representing the given text string.	java.lang.Long	Number (as text)	The input text string representing a number	java.lang.String	Yes
LOWER	Performs the lower case conversion of the specified text string.	java.lang.String	Text	The input text string	java.lang.String	Yes
LTRIM	Clear a string, removing leading whitespaces.	java.lang.String	Text	The text string to be trimmed	java.lang.String	Yes
MID	Returns the text from the middle of a text string.	java.lang.String	Text	The input text	java.lang.String	Yes
			Start	The initial position to extract the text	java.lang.Integer	Yes
			Characters num	The number of characters	java.lang.Integer	No
PROPER	Capitalizes each words of the specified text. The remaining parts of words are in lowercase.	java.lang.String	Text	The input text	java.lang.String	Yes
REPLACE	Replaces parts of a text string with a different one. Starting from a specified position, removes a certain number of characters and then insert the new text.	java.lang.String	Original Text	The input text to modify	java.lang.String	Yes
			Characters num	The number of characters to remove	java.lang.Integer	Yes
			New Text	The text that will replace the old one	java.lang.String	Yes
REPT	Replicates an input text string for a specified number of times.	java.lang.String	Original Text	The input text to replicate	java.lang.String	Yes
			Number of copies	The needed number of copies	java.lang.Integer	Yes
RIGHT	Returns the specified number of characters (1 by default) from the right side of the input text.	java.lang.String	Text	The input text	java.lang.String	Yes
			Characters num		java.lang.Integer	No
RTRIM	Clear a string, removing trailing whitespaces.	java.lang.String	Text	The text string to be trimmed	java.lang.String	Yes
SEARCH	Returns the position of a string of text in another string. Search is not case-sensitive.	java.lang.Integer	Find Text	The text to find	java.lang.String	Yes
			Text to search	The text to look into	java.lang.String	Yes
			Start position	The initial position	java.lang.Integer	No
SUBSTITUTE	Substitutes new text for old text in a text string. When no occurrence is specified all occurrences are replaced.	java.lang.String	Original Text	The text to be modified	java.lang.String	Yes
			Old Text	The old text to be replaced	java.lang.String	Yes
			New Text	The new text that will replace the old one	java.lang.String	Yes
			Occurrence	The occurrence of old text to be replaced	java.lang.Integer	No
T	Returns the text string if the value is a string, otherwise an empty string is returned.	java.lang.String	Generic value	The object value to be tested	java.lang.Object	Yes
TEXT	Converts a number into a text string according to a specified format.	java.lang.String	Number	The number to be formatted	java.lang.Number	Yes
			Format	The format pattern	java.lang.String	Yes
TRIM	Clear a string,removing leading and trailing whitespaces.	java.lang.String	Text	The text string to be trimmed	java.lang.String	Yes
UPPER	Performs the upper case conversion of the specified text string.	java.lang.String	Text	The input text string	java.lang.String	Yes

Built-in Functions Examples

Numeric / Mathematical Functions	Expression	Result
-245   is even	ISEVEN(ABS(-245))	false
14.4 * 22.56 * 10 * 34	PRODUCT(14.4, 22.56, 10, 34)	110.453,76
Random number between 0 and 1000	1000 * RAND()	315,684
Factorial of 5	FACT(5)	120
SQRT(6.25)	SQRT(6.25)	2.50
Max value in [4,6,2,3,9,4,1,7,3,8]	MAX(4, 6, 2, 3, 9, 4, 1, 7, 3, 8)	9

Date & Time Functions	Expression	Result
Current date	DATEFORMAT(NOW(), "EEEE, MMM d, yyyy")	luni, Sep 7, 2015
Current year	YEAR(TODAY())	2015
Four months later	DATEFORMAT(EDATE(TODAY(), 4), "MM/dd/yyyy")	01/07/2016
Five years ago	DATEFORMAT(EDATE(TODAY(), -60), "MMMM d, yyyy")	septembrie 7, 2010
Current week number	WEEKNUM(TODAY())	37
Next working day	DATEFORMAT(WORKDAY(TODAY(),1), "EEE, MMM dd")	Ma, Sep 08
Years since 2000	YEARS(2000, 1, 1), NOW())	15
Current time	DATEFORMAT(TODAY(), "hh:mm:ss a")	01:14:30 PM

Text Functions	Expression	Result
Concatenate "Hello", " ", "World"	CONCATENATE("Hello", " ", "World")	Hello World
Case sensitive search for "ll" in "Hello"	"Found on position " + (FIND("Hello", "ll") + 1)	Found on position 3
Case insensitive search for "LL" in "all"	"Found on position " + (SEARCH("LL", "all") + 1)	Found on position 2
Lower case for "Hello WORLD"	LOWER("Hello WORLD")	hello world
Capitalize each word	PROPER("Capitalize each word")	Capitalize Each Word
Replicates "Hello " three times	REPT("Hello ", 3)	Hello Hello Hello
Substitute "o" by "0" in "Hello World"	SUBSTITUTE("Hello World", "o", "0")	Hello W0rld
Extract "orl" from "Hello World"	MID("Hello World", 8, 3)	orl

Logical Functions	Expression	Result
This is true.	TRUE()	true
This is false.	FALSE()	false
3 < 5 AND 3 > 7	AND(3 < 5, 3 > 7)	false
3 < 5 OR 3 > 7	OR(3 < 5, 3 > 7)	true
Current month is before July	IF(MONTH(TODAY()) < 7, "YES", "NO")	NO
